

Sodium Silicate

PRODUCT CODE : PASA 016

PRODUCT DESCRIPTION

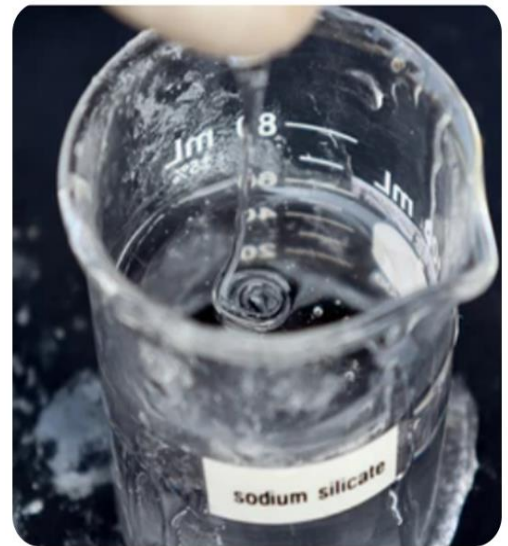

PASA 016 is non ferric or iron free Sodium Silicate.

Sodium silicate cement additives as extenders to produce low-slurry densities. These additives help tie up the additional water used for these slurries.

PASA 016 also accelerate cements to reduce waiting time and increase early compressive strength development.

PRODUCT FEATURES

- Can be used to produce thixotropic slurries that help reduce the possibility of lost circulation.
- Accelerates the cement's setting time and promotes good early compressive strength
- Reduces cement density by increasing the water/cement ratio
- Reduces free water

PRODUCT PROPERTIES

Appearance	: Clear to cloudy Liquid
Typical temperature range	: up to 250 of BHCT
Typical density range	: as low as 11.4 ppg
Typical concentration range	: 20 – 80 gps
Specific Gravity	: 1,41
pH	: 11 – 12.5
